DETAILED ACTION

Examiner's Statement of Reasons for Allowance

1. Claims 35-81 are allowed over prior art.
2. This action is in reply to applicant's correspondence of 05 July 2007.
3. The following is an examiner's statement of reasons for the indication of allowable claimed subject matter.
4. As per claims 35, 40, 45, 50-52, 58, 64, 70-71 and 78-81 generally, prior art of record, Yang et al, U.S. Patent 6,331,974 B1, DeBellis et al, U.S. Patent 6,044,388, fails to teach alone, or in combination, other than via hindsight, at the time of the invention, the features as discussed and remarked upon in the response of 05 July 2007 to office action of 2/5/2007.

Specifically, (as per claim 35, for example) prior art dealing with various methods of dealing with the spreading aspects of spread spectrum communications (i.e., CDMA type communications environments), is generally known to exist per se, (i.e., the use of higher entropy spreading to accomplish the security aspects; Nguyen, L., 'Self-Encoded Spread Spectrum Communications', IEEE, May 1999, pages 182-186, <http://ieeexplore.ieee.org/iel5/6639/17706/00822668.pdf>). However, nowhere in the prior art is found collectively the *italicized* claim elements (i.e., the specific use of the PN combined with an encrypted sequence (versus the encryption applied at the content level per se, to achieve the security of the communications signal) to create the high entropy information used to do the spreading), at *the time of the invention*, serving to patently distinguish the invention from said prior art;

Art Unit: 2136

“35. A method for secure wireless communication *using spread spectrum principles*, comprising:

generating at least one pseudorandom number (PN) sequence;

generating at least one encryption sequence based on at least one of

key and

time-varying input;

combining the PN sequence with said encryption sequence

to render an encrypted PN sequence; and

using the encrypted PN sequence

to spread a communication signal.”.

5. Dependent claims 36-39, 41-44, 46-49, 53-57, 59-63, 65-69 and 72-77 are allowable by virtue of their dependencies.
